

Assembling the Yukon Stand

The stand is made up of four pieces- one front piece, two sides and a connector piece at the rear.

Join the two side pieces to the front by sliding the slots on front and sides together.

The upper edge of the pieces is identified by the small tabs which should protrude upwards.

Separate the sides and insert the last piece into the slots on sides.

The Yukon sits on the stand, rear against the tabs and sides within the tabs at either end of the front piece as in the picture below
